

MULTISHIELD SYSTEM - Protection & Forward Operations Unit

The Multishield System by Nova Tactics Defence Technologies (NCAGE G3252) is a modular, high-durability protection platform, designed for demanding operational and perimeter-security environments. Its construction and functionality make it suitable for dual-use deployment - both civilian (facility security, gate control, building protection, rapid-response teams, public-order units) and military applications in camps, bases, and high-threat areas where fast and effective personnel protection is required.

MULTISHIELD SYSTEM - Protection & Forward Operations Unit

Construction & Protection

- Manufactured from certified antiballistic steel plates (6–20 mm) according to customer requirements.
- Resistant to small-arms fire, projectile fragments, stones, incendiary devices (e.g., Molotov cocktails), and other direct hostile actions
- Reinforced industrial welds ensuring maximum structural integrity
- Anti-corrosion surface treatment for long service life in harsh and high-risk environments

Modular Design – Multi-Role Applications

1. Mobile Ballistic Shield

- Provides instant protection for security teams and operational personnel
- Suitable for use in both open and urban areas
- Ideal for rapid-response operations, personnel extraction, or safe approach to threat points

2. Guard Post / Sentry Station / Checkpoint Unit

Ideal for installation at: main gates, vehicle & personnel access points, building entrances, facility perimeters, and critical infrastructure.

Optional integrations:

- Electrical wiring
- LED lighting system
- Mounts for floodlights or auxiliary equipment
- Observation windows or secure equipment-use ports

3. Assault Support & Safe Withdrawal Unit

- Functions as a protective shield during entry or exit of security teams from threatened areas
- Enables safe retreat or movement of personnel under threat
- Supports rescue operations and evacuation of trapped individuals in dangerous conditions

PRODUCTION

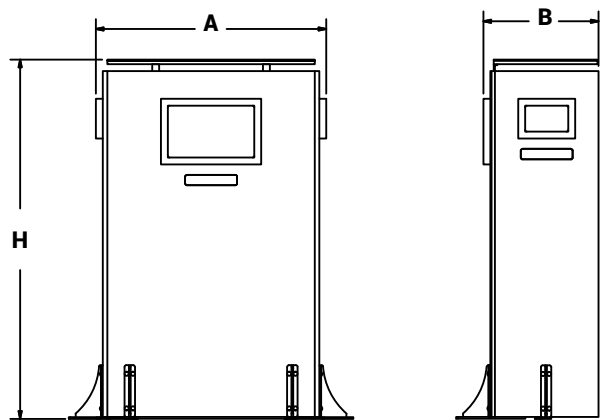

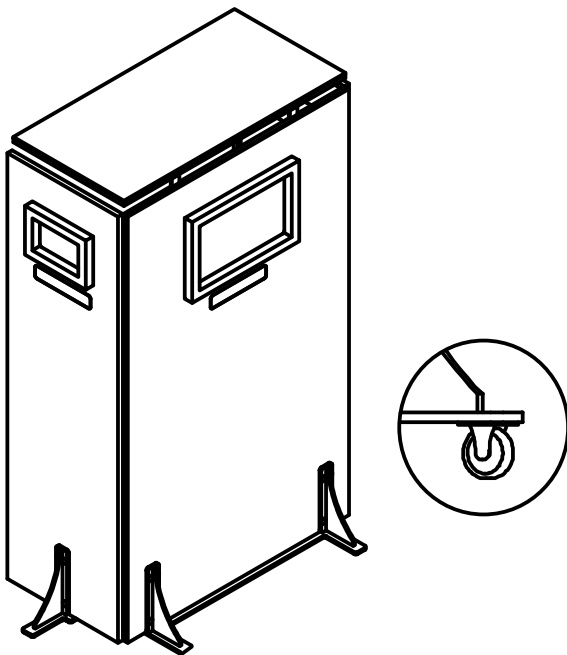

Operational Roles

- Mobile ballistic cover for security and operational units
- Personnel protection in urban or mixed environments
- Safe extraction of injured or isolated individuals
- Fixed or semi-fixed solution for checkpoints and guard posts
- Reinforcement of perimeter security for facilities and critical infrastructure
- Support for entry operations or creation of safe movement corridors

Customization Options

- Electrical installation for permanent positions
- Integrated lighting systems
- Searchlight mounting
- Observation windows / firing ports
- Custom colours (Military Green, Sand, Anthracite or custom finishes)
- Ground anchoring or optional wheels for easy relocation

Ballistic resistance is dependent on caliber, engagement distance, and test conditions, in accordance with **NATO STANAG 2280**.
