SANGARS DATA SHEET

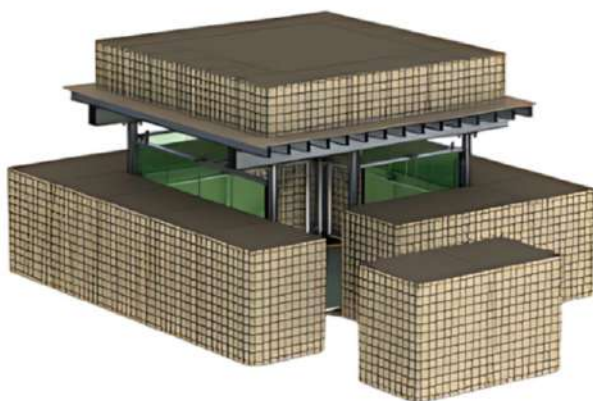

## HESCO SANGARS SAFE AND SECURE OBSERVATION POINTS

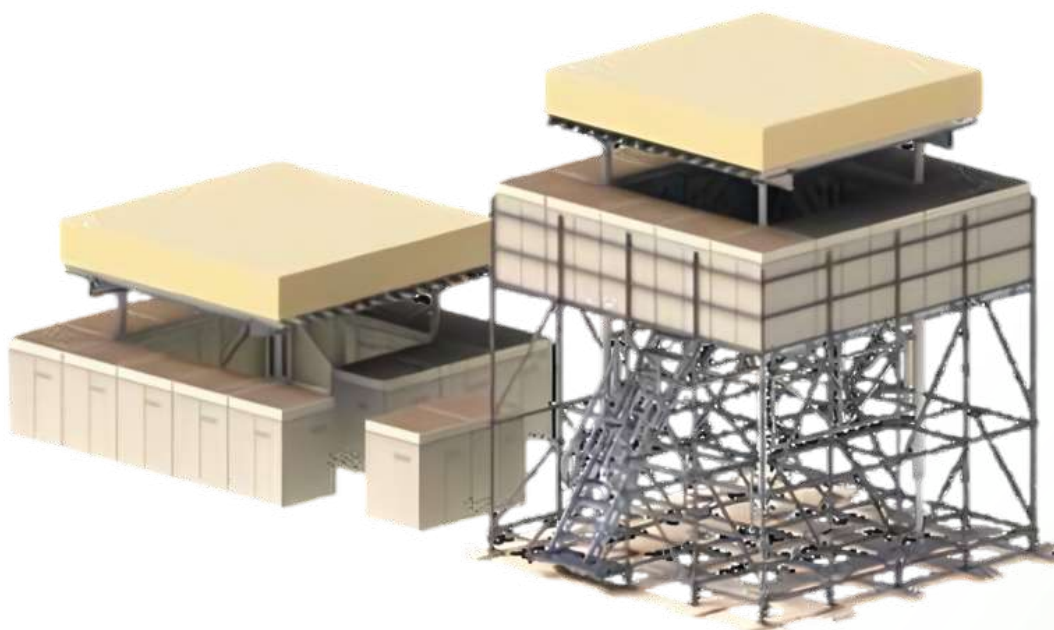

Our ground mounted and elevated sangars are modular units enable your personnel to safely observe the perimeter or control entry points. Sangars dominate the operational area and so allow excellent vision and arcs of fire.

**Ground Mounted Sangar (GMS)**

**Expeditionary Elevated Sangar (EES)**

Sangars range is constructed using our unique earth-filled modular MIL units. This means that the Sangars can be assembled in only eight hours with a construction team, a suitable loading machine and minimal ground preparation.

Once the Sangar is no longer needed, it can be quickly disassembled. The MIL units are flat-packed, so even after they've been taken apart, the Sangars can be easily redeployed, making them cost-effective.

Ground Mounted and Elevated Sangars work as guard posts and sentry points in remote expeditionary missions. They can also be used at key strategic points to handle high volumes of traffic.

## General Dimensions

Product	Height	Depth	Length
GMS	3.7	5.5	5.5
EES	7.36	5.5	5.5
